ScoopVerse - Successful Form Submission

After POST submission, Django returns a success response while keeping the form workflow clear.

ScoopVerse - views.py POST Handling

The view reads request.POST values and saves them with Contact.objects.create().

Muhammad Ahmed

About Me

A little about who I am and what I do.

Hi! I'm Muhammad Ahmed, a computer science student based in Karachi, Pakistan. I'm deeply interested in backend web development and love building projects that solve real problems.

I started my coding journey with Python and quickly fell in love with Django's elegant philosophy. I enjoy working on full-stack projects, from designing clean database schemas to building polished user interfaces.

When I'm not coding, you'll find me reading tech blogs, experimenting with graphic design, or helping juniors debug their first programs.

🎓 EDUCATION

Currently pursuing Bachelor's in Computer Science. Intermediate completed with distinction.

💡 INTERESTS

Web Development, Python scripting, Graphic Design, Open Source, and UI/UX Exploration.

🎯 CAREER GOAL

To become a professional Django backend developer and contribute to impactful web applications.

👉 STRENGTHS

Quick learner, detail-oriented, problem solver, strong communicator, and a collaborative team player.

Education

My academic background and qualifications.

Bachelor of Computer Science

University of Karachi
2023 – Present

Intermediate

Govt. Degree Science College, Karachi
2021 – 2023

Matric

Karachi Model School
2019 – 2021

Skills

Technologies and tools I work with.

Graphic Designing

Django

80%

Career Goal

Where I'm headed.

My goal is to become a skilled Django backend developer who builds scalable, clean, and maintainable web applications.

In the near term, I want to master Django REST Framework, learn deployment, and work on real-world web projects.

Let's Connect

Fast Learner — Able to pick up new technologies quickly.

Detail-Oriented — I care about clean code and proper structure.

Team Player — Comfortable working with others.

Problem Solver — I solve problems step by step.

My Projects

A collection of things I've designed and built.

All Projects

Click any project to learn more or view the live demo.

Calculator App

A simple calculator application that performs basic arithmetic operations such as addition, subtraction, multiplication, and division. It has a clean user interface and beginner-friendly structure.

HTML, CSS, JavaScript

Portfolio Website - Admin Data Displayed on Page

After saving in admin, the new project appears on the public website automatically.

Portfolio models.py - Contact, Project and Skill Models

Three models show both directions: user-to-database and admin-to-website data flow.

The screenshot shows a Visual Studio Code editor window with a Django project named 'portfolio_project_django'. The Explorer sidebar on the left displays the project structure, including folders like 'portfolio_website', 'myenv', 'portfolio_project', and 'portfolio_app'. The 'views.py' file in the 'portfolio_app' folder is selected and open in the main editor. The code in 'views.py' defines three views: 'home', 'projects', and 'contact'. The 'home' view fetches all skill records. The 'projects' view fetches all project records ordered by creation date. The 'contact' view handles form submissions, saving contact data if the form is valid. The status bar at the bottom indicates the current position is at line 43, column 1.

```
1 from django.shortcuts import render
2 from .models import Contact, Project, Skill
3
4 def home(request):
5     skills_data = Skill.objects.all()
6     return render(request, 'portfolio_app/home.html', {
7         'skills': skills_data
8     })
9
10
11 def projects(request):
12     projects_data = Project.objects.all().order_by('-created_at')
13     return render(request, 'portfolio_app/projects.html', {
14         'projects': projects_data
15     })
16
17
18 def contact(request):
19     success = False
20     error = False
21
22     if request.method == 'POST':
23         name = request.POST.get('name')
24         email = request.POST.get('email')
25         subject = request.POST.get('subject')
26         message = request.POST.get('message')
27
28         if name and email and subject and message:
29             Contact.objects.create(
30                 name=name,
31                 email=email,
32                 subject=subject,
33                 message=message
34             )
35             success = True
36         else:
37             error = True
38
39     return render(request, 'portfolio_app/contact.html', {
40         'success': success,
41         'error': error
42     })
43
```

Portfolio views.py - Querying and Saving Data

Views fetch Project and Skill records for pages and save Contact form submissions.
